9 TIPS ON KEEPING CASK ALE

Over 90% of consumers say that quality is the most important factor. Two thirds will reject a pint if it is perceived to be poor in quality.

1. ORDERING

Order the correct size of cask and aim to sell it within three days. If the cask is left for more than three days, the beer will start to taste dull and tired.

2. STORAGE

Casks must be stored in a temperature-controlled cellar between 11°C and 13°C (52–55°F), ideally at 12°C (54°F). Beer needs to be at the right temperature to condition correctly.

3. STILLAGING

Casks should be stillaged for at least three days before sale. If some casks have to be stillaged later, roll them before stillaging. Level stillaging creates a gas pocket beneath the shive and encourages good venting when soft, porous pegs are inserted. As the sediment drops, it falls safely into the belly of the cask, away from the tapping point. If the cask is stillaged on a forward tilt, the gas pocket will be at the back of the cask, so beer and not carbon dioxide gas will be pushed through the soft porous tap.

4. PEGGING AND VENTING

Casks should be vented with a soft porous peg 2–6 hours after delivery. Check the cask frequently and change the peg if it becomes blocked. When strong fermentation finishes, insert a hard, non-porous peg into it.

Why? This brings the beer to its ideal condition for the customer. It helps with the clarification process and once the beer is on sale it will help maintain the right amount of carbon dioxide.

5. TAPPING

Tap all casks 24–48 hours before they go on sale.

Why? This eliminates the opportunity for microorganisms to spoil the beer.

6. SAMPLING

Sample beers for clarity, aroma and taste after tapping each day before serving. Always sample from the cask before connecting the beer lines.

Why? Pulling through to the bar wastes beer and if the beer isn't ready, the customer notices.

7. SERVING

Once on sale, the beer is exposed to air which causes rapid deterioration. Empty casks as soon as possible, ideally within three days.

Why? Air drawn into the cask causes oxidation, which causes the ale to sour.

8. TILTING (STOOPING)

Gently tilt the cask when it's between 1/2 and 2/3 full, either by raising the back or lowering the front.

Why? Tilting the cask too far or too quickly could disturb the sediment, risking hazy beer.

9. CLEANING

Clean beer lines and equipment every five days using the equipment and methods recommended by your beer company cask supplier.

Why? One of the most important factors in high quality cask beer is the cleanliness of the dispense equipment. As well as harming the taste and clarity of the beer, dirty systems can cause malfunctioning and uncontrollable fobbing.

No.1

Appleshed Premium and Dark Fruits cider are both made by Westons, a family run business in Herefordshire, and cider makers since 1880. Made with apples from Westons' 340-acre orchard, Appleshed is a quintessentially British craft cider, down to the last drop.

Our South West Orchards range is lovingly crafted by Sheppy's, an independent family-run Somerset-based cider business owned by David and Louisa Sheppy. Through more than 200 years of making real premium craft cider, six generations of the Sheppy family have weathered the ups and downs of combining farming with cider-making by embracing change and opportunity.
